

## Patent Prosecution

Our patent prosecution professionals guide our clients in preparing, filing and prosecuting domestic and international patent applications. We assist clients in making business-driven strategic decisions about building their patent portfolios to cost-effectively protect their technology and increase market share. Our clients range in size and sophistication from small high-tech start-ups to Fortune 100 companies. Our professionals have degrees and, in many cases, technical work experience in computer science, electrical engineering, mechanical engineering, chemistry, pharmaceuticals, biologics, thermodynamics and other technical disciplines.

We are well-versed in responding to examiners' rejections and objections, appealing to the Patent Trial and Appeal Board or the Court of Appeals for the Federal Circuit, and representing clients in reissue and reexamination proceedings. In an intellectual property landscape where the terrain is constantly shifting, we help our clients keep their intellectual property secure and maximize its full potential.
